

12 Bits Shift Register Latched Constant Current Driver IC

PT6956

DESCRIPTION

PT6956 is a 12 bits shift register latched constant current driver IC utilizing CMOS Technology used to unify the luminance of the LED panel. It is equipped with serial I/O interface for multiple chips, cascading and serial input, parallel output for LED Interface. Pin assignments and application circuits are optimized for easy PCB layout and cost saving advantages.

FEATURES

- CMOS Technology
- Serial I/O, Parallel Output Interface
- Constant Current Output (adjustable by external resistor for 50mA max.)
- Cascade Extension
- Available in 20 - pin, SO Package

APPLICATION

- LED Panel Driver

12 Bits Shift Register Latched Constant Current Driver IC
