KGF1531

Small-Signal Amplifier

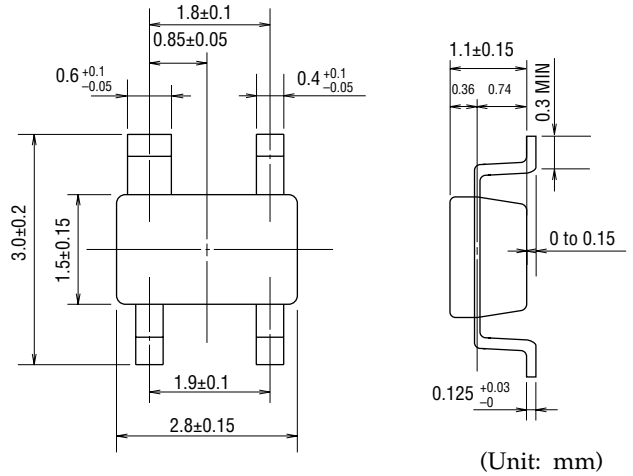
GENERAL DESCRIPTION

The KGF1531 is a high-performance GaAs FET small-signal dual-gate mixer for L-band frequencies that features low voltage operation, low current operation, high conversion gain, and low distortion. The KGF1531 specifications are guaranteed to a fixed matching circuit for 3 V and 1.9 GHz; external impedance-matching circuits are also required. Because of the high 3rd-order intercept point, the KGF1531 is ideal as a small-signal receiving mixer for L-band personal handy phones, such as digital keying cordless phones that require low intermodulation properties.

FEATURES

- Low voltage and low current operation: 3 V, 8 mA (max.)
- Specifications guaranteed as the mixer operation to a fixed matching circuits for 3 V, 1.9 GHz
- High conversion gain: 12 dB (typ.) at 1.9 GHz
- Low distortion: 3rd-order intercept point = 12.5 dBm (typ.) at 1.9 GHz
- Self-bias circuit configuration with built-in source capacitor
- Package: 4PSOP

PACKAGE DIMENSIONS



(Unit: mm)

Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating
Solder plate thickness	5 µm or more
