CDSH270

SCHOTTKY DIODE

JEDEC DO-35 CASE

DESCRIPTION

The CENTRAL SEMICONDUCTOR CDSH270 is a Silicon Schottky diode specially designed to replace Germanium diodes manufactured with 1950's technology like the 1N270, 1N277, etc. with 1990's technology. Some advantages of this new technology are lower forward voltage, lower leakage, faster switching speed, and a more robust package.
