R₆ TECHNOLOGY

Product Summary

Part Number	Radiation Level	R _{Ds(on)}	I _D
IRHNJ67130	100K Rads (Si)	0.042Ω	22A*
IRHNJ63130	300K Rads (Si)	0.042Ω	22A*

International Rectifier's R₆TM technology provides superior power MOSFETs for space applications. These devices have improved immunity to Single Event Effect (SEE) and have been characterized for useful performance with Linear Energy Transfer (LET) up to 90MeV/(mg/cm²).

Their combination of very low R_{Ds(on)} and faster switching times reduces power loss and increases power density in today's high speed switching applications such as DC-DC converters and motor controllers. These devices retain all of the well established advantages of MOSFETs such as voltage control, ease of paralleling and temperature stability of electrical parameters.

Features:

- Low R_{Ds(on)}
- Fast Switching
- Single Event Effect (SEE) Hardened
- Low Total Gate Charge
- Simple Drive Requirements
- Ease of Parallelizing
- Hermetically Sealed
- Surface Mount
- Ceramic Package
- Light Weight

Radiation Characteristics

IRHNJ67130

International Rectifier Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at International Rectifier is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
