TFT COLOR LCD MODULE

**TM150XG-22L01A**

- 38cm (15.0 inch) diagonal
- XGA resolution (1024×R·G·B×768 dots)
- Wide View Angle
- Digital RGB (RGB×6 bits×Dual Port)
- Power Supply Voltage : 5V
- Ear mount
- With CFL backlight unit
- Nonglare surface type

**■NOTICES**

- 1 .The contents stated in this document and the product may be subject to change without prior notice.  
When you kindly study to use this product, please ask us or our distributor for the latest information.
- 2 .This product is developed and produced for usage onto normal electronic products (office automation equipments, communication peripherals, electric appliance products, game machines, etc.) and is not suitable for applications which need extremely high reliability and extreme safety (aero- or space-use machines, control equipments for nuclear power, life keeping equipments, etc.).
- 3 .This document shall not grant or guarantee any right to adapt intellectual property or any other patents of third party.
- 4 .Please use this product correctly according to operating conditions and precautions for use stated in this document.  
Please install safety proof in your designing to avoid human accident, fire accident and social damage which may be resulted from malfunction of this product.
- 5 .This product is not designed to withstand against radiant rays.
- 6 .It is strictly prohibited to copy or publish a part or whole of this document without our prior written approval.

[ Note 1 ]  $\phi$  and  $\theta$

[ Note 3 ] Response time

[ Note 2 ] Contrast ratio "K"

$$K = \frac{\text{Brightness at White}}{\text{Brightness at Black}}$$

[ Note 4 ] This shall be measured at center point ③ of Note 7.

[ Note 5 ] The brightness shall be the average of the following 5 points of Note 7.

[ Note 6 ] The brightness uniformity shall be calculated by using following formula.

$$\text{Brightness uniformity} = \frac{\text{Maximum Brightness of 5 points}}{\text{Minimum Brightness of 5 points}}$$

[ Note 7 ] Measurement points

[ Note 8 ] Measurement condition

- ① Measurement equipment : BM-5A(TOPCON Corp.), Field=2°
- ② Ambient temperature  $T_a$  :  $25 \pm 2^\circ\text{C}$
- ③ LCD : All pixels are WHITE,  $V_{DD}=5.0\text{V}$ ,  $f_v=60\text{Hz}$
- ④ Measure after 30 minutes of CFL warm up.
- ⑤  $I_L=5.5 \text{ mArms}$  with the CFL inverter CXA-P1212-VJL (TDK).

## ■ BACKLIGHT CHARACTERISTICS

This module is used the back light with 2 CFL.  
Please follow the characteristics of 1 CFL as below.

$T_a=25^\circ\text{C}$

ITEM	SYM.	CONDITIONS	MIN	TYP	MAX	UNIT	NOTE
Lamp voltage	VL		-	630	-	Vrms	at $I_L=5.5 \text{ mArms}$
Lamp current	$I_L$		4	-	6	mArms	(Recommended value)
Operating frequency	$f_L$		40	60	65	kHz	(Recommended value)
Start up voltage	Vs		-	-	1500	Vrms	at $T_a=0^\circ\text{C}$
Operating life	tOL		50000	-	-	Hours	at $I_L=6.0 \text{ mArms}$

[ Note 1 ] Backlight driving conditions (operating frequency  $f_L$  especially) may interfere with horizontal frequency  $f_H$ , causing the beat or flicker on the display. Therefore the operating frequency  $f_L$  shall be adjusted in relation to horizontal frequency  $f_H$  to avoid interference.

[ Note 2 ] The inverter open voltage should be larger than start up voltage, otherwise backlight may blinking for a moment after turns on or not be turned on. And this voltage should be applied to lamp for more than 1 second to start up, otherwise backlight may not be turned on.

[ Note 3 ] If driving current waveform is asymmetrical, mercury deviation inside of CFL will incline to one side and consequently abnormal lighting may occur. To prevent such unfavorable lighting, driving current waveform is asked to have unbalance rate of less than 10% and wave-height rate of less than  $\sqrt{2} \pm 10\%$ . And this driving waveform shall be confirmed in your system.

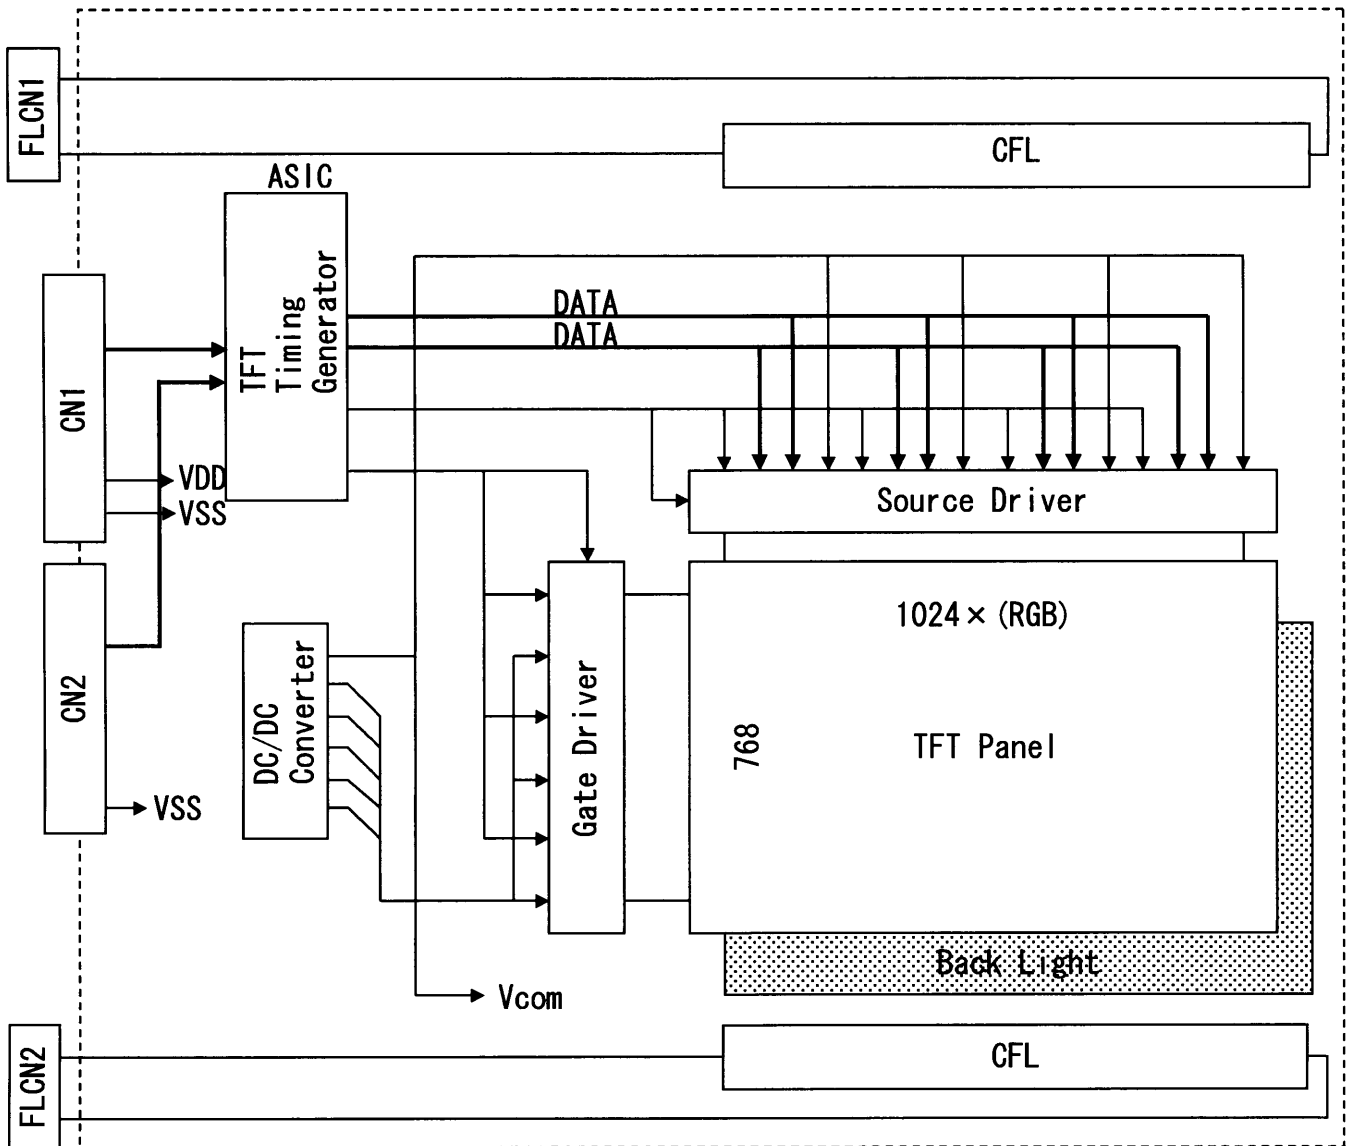

$$\text{Unbalance rate} = |I_p - I_{-p}| / I_L \times 100 (\%)$$

$$\text{Wave-height rate} = I_p \text{ (or } I_{-p}) / I_L$$

$I_p$  : High peak value  
 $I_{-p}$  : Low peak value  
 $I_L$  : Effective value

## ■ POWER ON/OFF SEQUENCE REQUIREMENT

When the power is off, Logic input must be kept at either low level or high impedance.

Power sequence for CFL(backlight) is not specified especially, however it is recommended to consider some timing difference between Logic input as shown above. If backlight lights on before LCD starts function, or if backlight is kept on after LCD stopped function, screen may look white for a moment or abnormal image may be displayed.

This is caused by variation in output signal from timing generator at Logic input on or off. It does not cause damage to liquid crystal molecule and driving circuit.

## ■ **PRECAUTIONS**

1. This data sheet explains the outline of LCD module. Before designing your system with this LCD module, please ask for specification to understand our more precautions and recommendations.
2. Please avoid disassembling or modification of this module.
3. Since this LCD module consists of glass, dropping, pinching strongly or punching may break or result in damage. When glass breaks, please be careful not to be injured by glass piece.
4. When glass breaks and fluid flows out, do not suck in, drink or touch the fluid. If the fluid should stick to hand or clothes, wipe off with soap or alcohol immediately and then wash it with water. If the fluid should get in eyes, wash eyes immediately with washing lotion for more than 15 minutes and then consult the doctor.
5. Since high voltage is applied to CFL during lighting, please make design to avoid electric shock or take care in handling. Since poor connection of CFL connector may cause burning due to leakage of high voltage, please make sure of proper connection.
6. CFL contains mercury inside. Please follow regulations or rules established by local autonomy at its disposal.
7. Please do not rub, press or touch the display surface with hard material or jigs, because the polarizer at surface can be easily scratched. When the display surface gets a drop of water or contamination, wipe it off lightly with soft cloth.
8. Since this LCD module contains semiconductors, please pay attention against static-electricity in handling.
9. Please switch OFF power supply before connecting or disconnecting interface connector.
10. For storage, please store under room temperature, low humidity and dark circumstance in original packing condition.
