#### **Test Method:**

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

#### ①Measurement place

A place that is nothing of extreme light reflected in the room.

### ②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. ( $Ee \le 10Lux$ )

#### **3**Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be  $\lambda p=940$ nm,  $\Delta \lambda=50$ nm. Also, photodiode is used of PD438B(Vr=5V). (Standard light / Light source temperature 2856°K).

#### Measuring system

According to the measuring system shown in Fig.-3
