

DC Film Capacitor MKT Radial Potted Type

APPLICATIONS

Blocking and coupling, bypass and energy reservoir, telecom, industrial, consumer

REFERENCE STANDARDS

IEC 60384-2

MARKING

C-value; tolerance; rated voltage; manufacturer's symbol; year and week of manufacturer; manufacturer's type

DIELECTRIC

Polyester film

ELECTRODES

Metallized

CONSTRUCTION

Mono construction
Series construction for 630 V 0.00068 μ F ~ 0.0018 μ F

RATED (DC) VOLTAGE

Standard size: 63 V, 100 V, 250 V, 400 V
Compact size: 100 V, 250 V, 400 V, 630 V

RATED (AC) VOLTAGE

Standard size: 40 V, 63 V, 160 V, 220 V
Compact size: 40 V, 63 V, 160 V, 220 V

FEATURES

Available taped and loose in box
RoHS compliant

ENCAPSULATION

Flame retardant plastic case and epoxy resin
(UL-class 94 V-0)

RoHS
COMPLIANT

CLIMATIC TESTING CLASS ACC. TO IEC 60068-1

55/100/56

CAPACITANCE RANGE (E12 SERIES)

0.00068 μ F to 1.5 μ F

CAPACITANCE TOLERANCE

$\pm 10 \%$, $\pm 5 \%$

LEADS

Tinned wire

RATED TEMPERATURE

85 °C

MAXIMUM APPLICATION TEMPERATURE

100 °C

PERFORMANCE GRADE

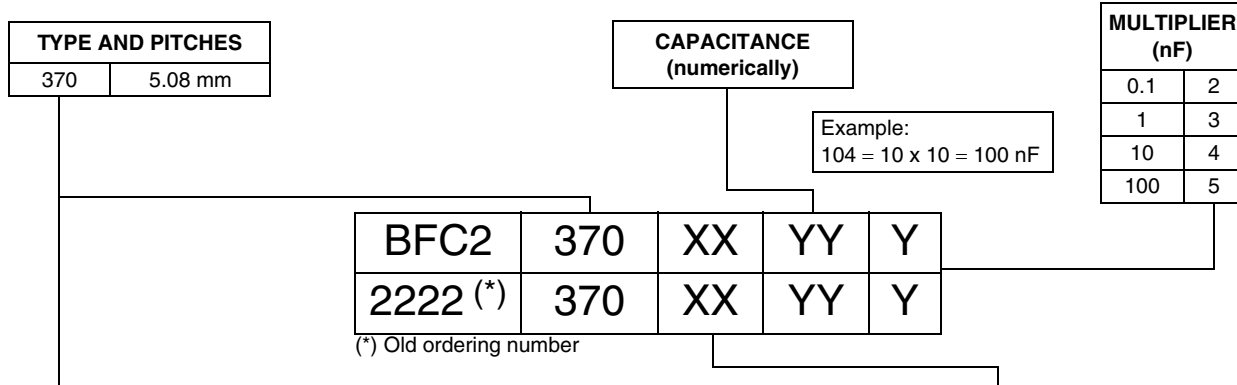

Grade 1 (long life)

DETAIL SPECIFICATION

For more detailed data and test requirements contact:
dc-film@vishay.com

COMPOSITION OF CATALOG NUMBER

TYPE	PACKAGING	LEAD CONFIGURATION	PREFERRED TYPES				
			C-TOL.	63 V	100 V	250 V	400 V
370 (standard size)	Loose in box	Lead length 4.0 + 1.0/- 0.5 mm	± 10 %	11	21	41	51
			± 5 %	12	22	42	52
		Lead length 26.0 ± 2.0 mm	± 10 %	15	25	45	55
			± 5 %	16	26	46	56
	Taped on reel (1)	H = 18.5 mm; P ₀ = 12.7 mm; Reel diameter = 356 mm	± 10 %	18	28	48	58
			± 5 %	19	29	49	59

MOUNTING

Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

For detailed tape specifications refer to packaging information: www.vishay.com/doc?28139 or end of catalog.

Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that stand-off pips are in good contact with the printed-circuit board:

- For pitches ≤ 15 mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

Space Requirements On Printed-Circuit Board

The maximum length and width of film capacitors is shown in the drawing:

- Eccentricity as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.
- Product height with seating plane as given by "IEC 60717" as reference: $h_{\max.} \leq h + 0.3$ mm

Storage Temperature

- Storage temperature: $T_{\text{stg}} = -25$ °C to $+40$ °C with RH maximum 80 % without condensation

Ratings and Characteristics Reference Conditions

Unless otherwise specified, all electrical values apply to an ambient temperature of 23 ± 1 °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 ± 2 %.

For reference testing, a conditioning period shall be applied over 96 ± 4 h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

CHARACTERISTICS

Capacitance as a function of frequency (typical curve)

Capacitance as a function of temperature (typical curve)

Max. DC and AC voltage as a function of temperature

Impedance as a function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Max. AC voltage as function of frequency

Maximum RMS current (sinewave) as a function of frequency

The maximum RMS current is defined by $I_{ac} = \omega \times C \times U_{ac}$.

U_{ac} is the maximum AC voltage depending on the ambient temperature in the curves “Max. RMS voltage and AC current as a function of frequency”.

Tangent of loss angle as a function of frequency

Insulation resistance as a function of the ambient temperature (typical curve)

HEAT CONDUCTIVITY (G) AS A FUNCTION OF (ORIGINAL) PITCH AND CAPACITOR BODY THICKNESS IN mW/°C

$W_{max.}$ (mm)	HEAT CONDUCTIVITY (mW/°C)	
	PITCH 5 mm	
2.5	2.5	
3.5	3.0	
4.5	4.0	
6.0	5.5	

POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free ambient temperature.

The power dissipation can be calculated according type detail specification "HQN-384-01/101: Technical Information Film Capacitors".

The component temperature rise (ΔT) can be measured (see section "Measuring the component temperature" for more details) or calculated by $\Delta T = P/G$:

- ΔT = Component temperature rise ($^{\circ}\text{C}$)
- P = Power dissipation of the component (mW)
- G = Heat conductivity of the component (mW/ $^{\circ}\text{C}$)

MEASURING THE COMPONENT TEMPERATURE

A thermocouple must be attached to the capacitor body as in:

The temperature is measured in unloaded (T_{amb}) and maximum loaded condition (T_{C}).

The temperature rise is given by $\Delta T = T_{\text{C}} - T_{\text{amb}}$.

To avoid radiation or convection, the capacitor should be tested in a wind-free box.

APPLICATION NOTE AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described hereunder. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

To select the capacitor for a certain application, the following conditions must be checked:

1. The peak voltage (U_{P}) shall not be greater than the rated DC voltage (U_{Rdc})
2. The peak-to-peak voltage ($U_{\text{P-P}}$) shall not be greater than $2\sqrt{2} \times U_{\text{Rac}}$ to avoid the ionisation inception level
3. The voltage peak slope (dU/dt) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by U_{Rdc} and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left(\frac{dU}{dt} \right)^2 \times dt < U_{\text{Rdc}} \times \left(\frac{dU}{dt} \right)_{\text{rated}}$$

T is the pulse duration.

4. The maximum component surface temperature rise must be lower than the limits (see figure max. allowed component temperature rise).
5. Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: "Heat conductivity"
6. When using these capacitors as across-the-line capacitor in the input filter for mains applications or as series connected with an impedance to the mains the applicant must guarantee that the following conditions are fulfilled in any case (spikes and surge voltages from the mains included).

Voltage Conditions for 6 Above

ALLOWED VOLTAGES	$T_{amb} \leq 85\text{ }^{\circ}\text{C}$	$85\text{ }^{\circ}\text{C} < T_{amb} \leq 100\text{ }^{\circ}\text{C}$
Maximum continuous RMS voltage	U_{Rac}	See "Max. AC voltage as function of temperature CBB952" per characteristics
Maximum temperature RMS-overvoltage (< 24 h)	$1.25 \times U_{Rac}$	U_{Rac}
Maximum peak voltage (V_{O-P}) (< 2 s)	$1.6 \times U_{Rdc}$	$1.3 \times U_{Rdc}$

EXAMPLE

$C = 330\text{ nF} - 63\text{ V}$ used for the voltage signal shown in next drawing.

$U_{P-P} = 40\text{ V}$; $U_P = 35\text{ V}$; $T_1 = 100\text{ }\mu\text{s}$; $T_2 = 200\text{ }\mu\text{s}$

The ambient temperature is $35\text{ }^{\circ}\text{C}$

Checking conditions:

1. The peak voltage $U_P = 35\text{ V}$ is lower than 63 Vdc
2. The peak-to-peak voltage 40 V is lower than $2\sqrt{2} \times 40\text{ Vac} = 113\text{ }U_{P-P}$
3. The voltage pulse slope (dU/dt) = $40\text{ V}/100\text{ }\mu\text{s} = 0.4\text{ V}/\mu\text{s}$
This is lower than $60\text{ V}/\mu\text{s}$ (see specific reference data for each version)
4. The dissipated power is 16.2 mW as calculated with fourier terms
The temperature rise for $W_{max.} = 3.5\text{ mm}$ and pitch = 5 mm will be $16.2\text{ mW}/3.0\text{ mW}/^{\circ}\text{C} = 5.4\text{ }^{\circ}\text{C}$
This is lower than $15\text{ }^{\circ}\text{C}$ temperature rise at $35\text{ }^{\circ}\text{C}$, according figure max. allowed component temperature rise
5. Not applicable
6. Not applicable
