

Description

The SE78L05D is three-terminal positive regulator. The SE78L05D can be used as Zener diode/resistor combination replacement. It offers an effective output impedance improvement of two orders of magnitude, and lower quiescent current. This fixed voltage regulators can provide local or on-card regulation for elimination of noise and distribution problems associated with single point regulation. It is an excellent solution to the stereo power supply on PC main board.

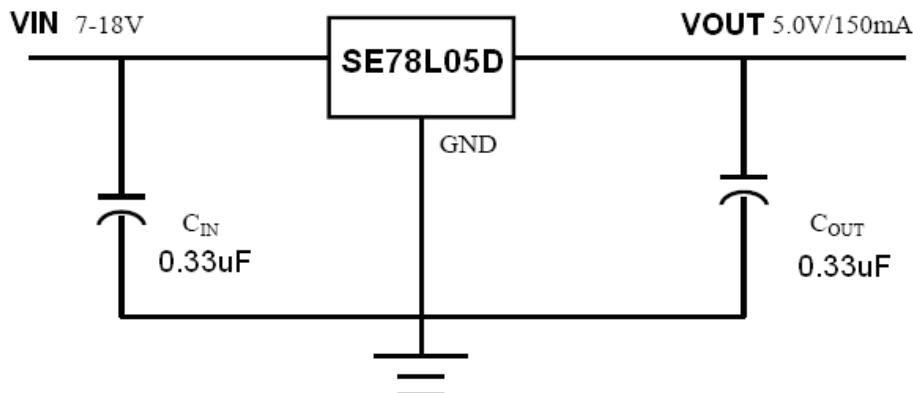

Features

- Output voltage of 5.0V (Typ.)
- Output current up to 150mA (Typ.)
- Minimum external components.
- Output voltage tolerances of $\pm 4\%$
- ESD rating is 3KV (Per MIL-STD-883D).

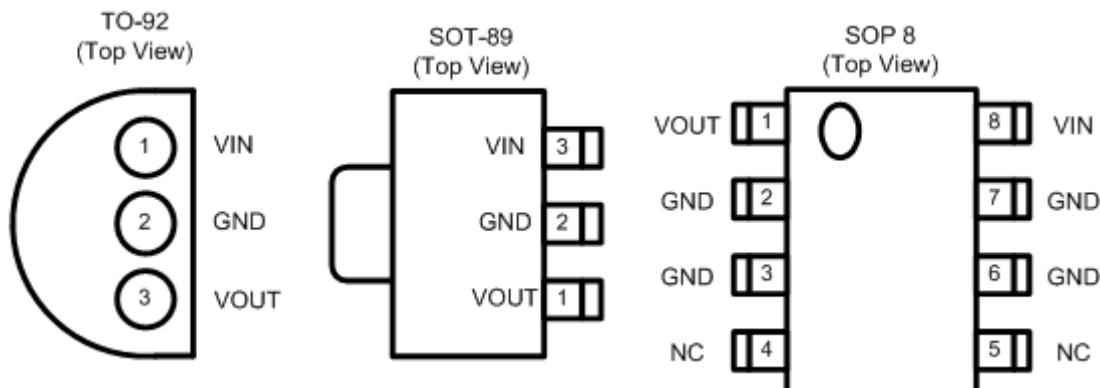

Application

- Sound card on PC main board.
- DVD-ROM, CD-ROM.
- Networking Equipments.
