Small and high accuracy Temperature Sensor IC Series High Accuracy detection

Thermostat Output Temperature Sensor ICs with Power Down Function

BDJ□□□1HFV Series

No.09047ECT01

●Description

BDJ□□□1HFV series is thermostat output temperature sensor IC with built-in temperature detection element,constant current circuit,high-accuracy reference voltage source in one chip.Temperature detection can be realized at ±2.5℃ accuracy without complicated design.It is the best temperature sensor IC for a portable equipment of micro and low current,the power down function, and the battery drive.It is possible to use it for a wide usage such as the heat detection and temperature monitors because it provides with the analog output in addition to the thermostat power output.
BDJ□□□1HFV series has 8 types of model at 5℃ intervals from +55℃ to +90℃ temperature range.

●Features

1) Detection Temperature Range 55～90℃ by 5℃ Step 8 products.
2) Power supply Voltage range 2.4～5.5V.
3) High Accuracy thermostat (typ.±1.0℃, max.±2.5℃ @Ta=55～90℃)
4) High Accuracy Analog Output (typ.±1.0℃, max.±2.5℃ @Ta=-30～100℃)
5) Analog Output Temperature Sensitivity (typ. -8.2mV/℃)
6) Low Supply Current (typ. 7.5μA)
7) Power down control function built in.(PD interface Voltage min 1.5V)
8) Small Package (typ. 1.60mm × 1.60mm × 0.60mm)
9) Low thermal resistance package (typ. 187℃/W)
10) ESD Rating 8kV (HBM)

●Applications

Cell phone, Digital Camera,Thermal Protection for Electrical Equipment (NoteBook PC, FPD-TV, etc.)

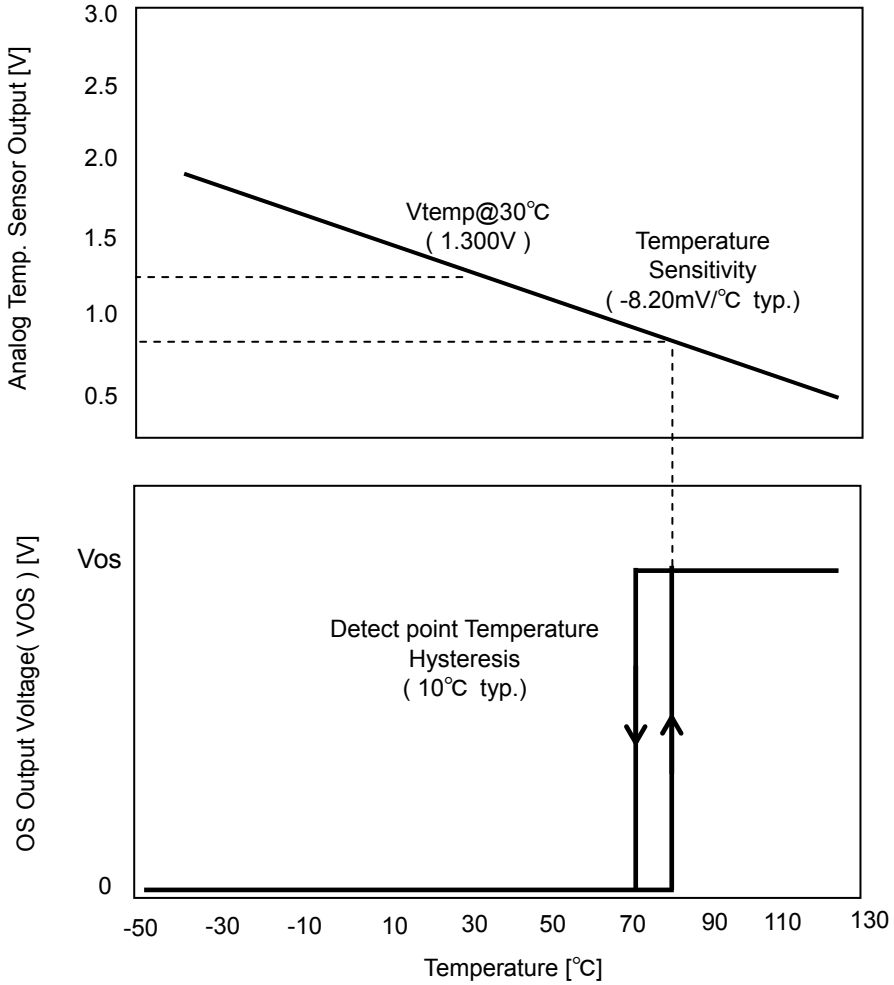
●Function Diagram（ex. 80℃ detect Active“H”type BDJ0801HFV）

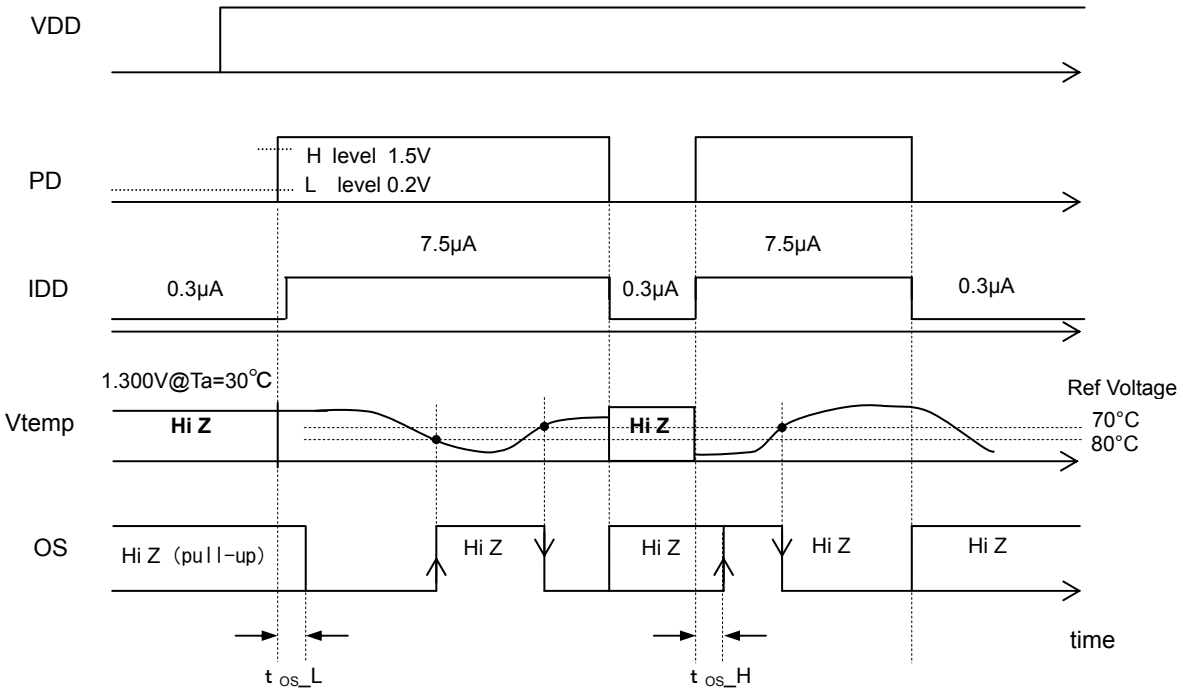
Temperature sensor internal IC sense temperature, Vtemp terminal output voltage convert temperature.
Vtemp value is 1.300[V] at Ta = 30[℃].
The value of Vtemp voltage reduce reversely proportional temperature at rate of –8.2mV/℃.



If the temperature over detect temperature,
internal comparator operate OS output “L” to “H”.(ex.active “H” Type)
In case of OS return to “L”,the temperature 10℃ lower than detect temperature.

●Operation Sequence

（ex.80℃ detect Active“H”type BDJ0801HFV）



BDJ0801HFV operate start after PD“H”Input.

Please read OS terminal signal below wait time after PD ”H” Input.

Ta	Symbol	Wait time
Under detect Temp.	t OS_L	200μs
Over detect Temp.	t OS_H	1000μs

●Notes for use

1) Absolute Maximum Ratings
An excess in the absolute maximum ratings, such as supply voltage, temperature range of operating conditions, etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

2) GND voltage
Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state.

3) Pin short and mistake fitting
When mounting the IC on the PCB, pay attention to the orientation of the IC. If there is a placement mistake, the IC may be burned up.

4) Operation in strong electric field
Be noted that using ICs in the strong electric field can malfunction them.

5) Mutual impedance
Use short and wide wiring tracks for the power supply and ground to keep the mutual impedance as small as possible. Use a capacitor to keep ripple to a minimum.
