1. Scope

- 1.1 This specification shall apply to inverter INVC816 to operate a cold cathode fluorescent lamp in the liquid-crystal display (LCD).
- 1.2 This inverter INVC816 is designed and adjusted for LMG74 * 0PLFC , LMG74 * 1PLBC and LMG532 * XUFC , LCD-module. (Hitachi Displays type name)

2. General Specifications

General specifications and condition for use are shown below.

| Item | Specification | |
|--|--------------------|--|
| Output Power | Nominal 1.35W | |
| Cooling condition | Free air flow | |
| Efficiency | 60 % min. | |
| Weight | 11 g max. | |
| Ambient temperature | Operating 10~50deg | |
| (direct ambient air of Inverter board) | Stock -20~70deg | |
| Humidity | 90 % RH.max. | |
| Corrosive gasses | Not acceptable | |
| Audible sound level | 35 dB max. at 30cm | |
| MTBF | 60000Hrs. min. | |

3. Electrical Characteristics

3.1.Maximum rating

| Items | Min. | Тур. | Max. | unit | Remarks |
|---------------|------|------|------|------|---------|
| Input voltage | | | 18.0 | V | |

3.2. Operationg Characteristics

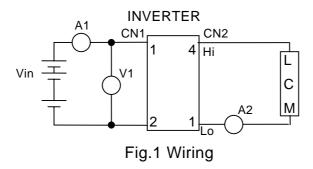

3.0x130mm Lamp

AT=25deg.C

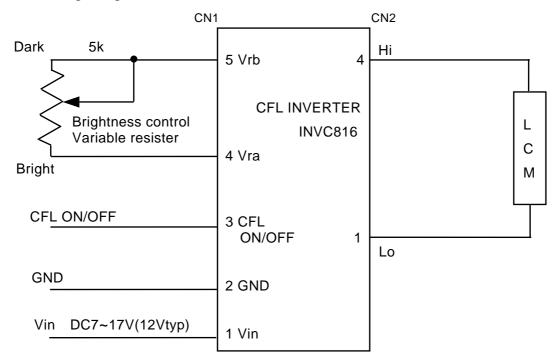

| Item | Min | Тур | Max | Unit | Remarks |
|----------------|-----|--------|------|----------|----------|
| Input voltage | 7.0 | 12.0 | 17.0 | V | |
| Input current | 130 | 180 | 230 | mA | at 12.0V |
| Rush current | | | 2.0 | Α | at 12.0V |
| Lamp current | 3.5 | 4.2 | 4.9 | mA | at 12.0V |
| Lamp power | | 1.35 | | W | at 12.0V |
| Main frequency | 50 | 65 | 80 | kHz | at 12.0V |
| Dimming range | | 100~50 | | % | |

All characteristics are measured by our certain test equipment. The measurement of condition should be stable lighting (more than 30 minutes after startup :at 25+/-1deg.C and no breath of wind) (The measurement of input rush current is exception).

- (1) The electrical characteristics are measured as we show on measurement diagram Fig.1. Vin=12.0V.
- (2) As we show on measurement diagram Fig.1, the test equipment shall be V1:DC Volt meter (Class0.5) A1:DC Current meter(Class0.5) A2:AC Current meter type2016(Y.E.W) or FLUKE45(FLUKE) Vin:PW18-2TP(Kenwood).
- (3) The line length of between the lamp and CN2(high voltage)is less than 150mm.

3.3. Wiring Diagram

Remark: Controled by external open-collecter circuit.

Fig.2 Wiring Diagram

4.Reliability

| Item | Test condition | | |
|------------------------------|--|--|--|
| Low temp. operate | 10deg.C, 12.0V, 100%output, 500Hrs | | |
| High temp. operate | 50deg.C, 12.0V, 100%output, 500Hrs | | |
| Low temp. stock | -20deg.C, 500Hrs | | |
| High temp. stock | 70deg.C, 500Hrs | | |
| High temp. and high humidity | 50deg.C, 90% 12.0V, 100%output, 500Hrs | | |
| Cyclic temp. operate | 10deg.C - 25deg.C - 50deg.C 1Hr each | | |
| | 12.0V, 100%output, 50cycles | | |
| Thermal shock | -20deg.C - 70deg.C, 0.5Hrs each 50cycles | | |
| Vibration | 3G, 30~200Hz, 0.5Hrs,xyz-axis | | |
| Impact test | 50G,xyz-axis | | |

5.Structures

5.1 Dimensions

Reference to drawing P.7

5.2 Interface specification

Input connector CN1:53261-0510(molex)

| Pin No. | Symbol | Comment |
|------------|----------|-------------------------|
| 1 111 140. | Cyllibol | Oomment |
| 1 | Vin | DC7~17V |
| 2 | GND | |
| 3 | CFL | ON: "L"Vol<0.8V,lol=2mA |
| | ON/OFF | OFF:"open" |
| 4 | Vra | LOWER potential |
| 5 | Vrb | UPPER potential |

Output connector CN2:IL-G-4P-S3L2-SA(JAE)

| Pin No. | Symbol |
|---------|--------|
| 1 | Lo |
| 2 | 1 |
| 3 | |
| 4 | Hi |

7.Precautions in Design

- 7.1 Please turn off the power supply of the inverter before the out put connector (CN2) be put in or put off. Because voltage of the output connector is very high.
- 7.2 The high-voltage wiring of lamps may affect the characteristics of this product even in the presence of a slight stray capacity of 1 to few pF. So, please check whatever the below points have fully considered.
 - (1) Please use UL1330 equivalents as inverter output leads and keep length within 150mm.
 - (2) Please keep the length of wiring as short as possible and at the same time avoid binding high-voltage leads together and fitting high-voltage leads near the shield.
 - (3) Consider the electric potential of the parts adjacent to a wire because it greatly affects the electric characteristics and startup characteristics.
- 7.3 In the case of put in and put off the connector(CN1), please switch off power supply of the inverter. If power supply is operating, it will be possible that the inverter break down.
- 7.4 Please pay attention in using the inverter. Because the transformer in the inverter is weak to impact.
- 7.5 If it was exposed to thermal shock(out of order), come to have a crack itself.
- 7.6 Please do not give it any changes, such as reworking it, applying and hardening with adhesives, molding with resin, fixing with tape.
- 7.7 Please make a tight connection output and input connector.(If inverter's connecter contact was imperfection, the components of inverter have high temperature and break down.)

7.8 Pay attention as printed circuit board is bent, and not adding excessive pressure when printed circuit board is built in. (Deterioration and the damage of component are caused, and movements of inverter are out of order.)
