

**MOS INTEGRATED CIRCUIT**  
**μPD4713**

**RS-232C LINE DRIVER/RECEIVER**

**DESCRIPTION**

The μPD4713 is a silicon gate CMOS IC which combines 3 sets of line drivers and receivers conforming to the RS-232C standard. A single +5 V power source operation is realized by built-in DC-DC converter. Moreover, the attractive additional functions are provided such as driver output control function, receiver input threshold hysteresis select function and standby function etc.

By these features, the μPD4713 is the best choice for DTE (Data Terminal Equipment), DCE (Data Circuit Terminating Equipment) and OAD (On-line Adapter).

**FEATURES**

- Conforms to EIA RS-232C standard
- Operates using +5 V power source
- Provides power-ON reset function
- Provides driver output OFF hold function
- Widths of receiver input threshold hysteresis are selectable
- Standby function
- Latch-up free

## RECOMMENDED OPERATING CONDITION

CHARACTERISTIC	SYMBOL	MIN.	TYP.	MAX.	UNIT
Supply Voltage	$V_{CC}$	4.5	5.0	5.5	V
Operating Temperature Range	$T_{OPT}$	-20		80	°C
