LV8415CB -

Bi-CMOS integrated circuit

Blurring correction driver IC for DSC H bridge × 2ch driver

Overview

LV8415CB is blurring correction driver IC for DSC.

Functions

- Actuator driver (saturation drive H bridge) × 2ch
- Constant current hall bias circuit × 2ch
- With built-in for PWM signal generation logic circuit × 2ch
- 8bitDAC for hall amplifier offset adjustment × 2ch
- Two systems in power supply (V_M: for actuator, V_{CC})
- With built-in low voltage malfunction prevention circuit
- Hall Amplifier × 2ch
- General-purpose amplifier × 2ch
- 8bitDAC for hall bias × 2ch
- Three line serial input
- With built-in thermal protection circuit

Specifications

Maximum Ratings at $Ta = 25^{\circ}C$

| Parameter | Symbol | Conditions | Ratings | Unit |
|-----------------------------|---------------------|------------------------------------|-------------|------|
| Supply voltage 1 | V _M max | | 6 | V |
| Supply voltage 2 | V _{CC} max | | 6 | V |
| Output peak current | I _O peak | OUT1 to 2 (t ≤ 10msec, duty ≤ 20%) | 600 | mA |
| Output current | I _O max | OUT1 to 2 | 350 | mA |
| Hall bias current | I _{HB} max | | 5 | mA |
| Allowable power dissipation | Pd max | On a specified board * | 1 | W |
| Operating temperature | Topr | | -20 to +85 | °C |
| Storage temperature | Tstg | | -55 to +150 | °C |

^{*} Specified board: 40.0mm×50.0mm×0.8mm, Four layers fiberglass epoxy circuit board.

Allowable Operating Ratings at Ta = 25°C

| Parameter | Symbol | Conditions | Ratings | Unit |
|------------------------|------------|------------|---------------------------|------|
| Supply voltage range 1 | \vee_{M} | | 2.7 to 5.5 | V |
| Supply voltage range 2 | Vcc | | 2.7 to 5.5 | V |
| Logic input voltage | VIN | | 0 to V _{CC} +0.3 | V |

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

SANYO Semiconductor Co., Ltd.

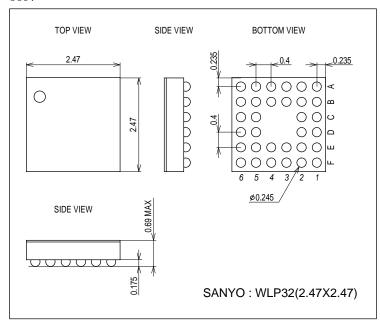

Electrical Characteristics at $Ta=25^{\circ}C,\,V_{CC}=3.3V,\,V_{M}=5.0V$

Serial data timing condition Serial data input timing chart

It inputs it from A0 in order of D11. The data transfer is done by the rising edge, and after all data transfers, the latch does all data to SCLK by the STB signal standing up. The STB signal accepts and the internal logic of IC doesn't accept the SCLK signal during "H".

Note: 1 pulse = 1CLK

The ON/OFF operation of the hall amplifier and the hall bias is done with the ST pin.

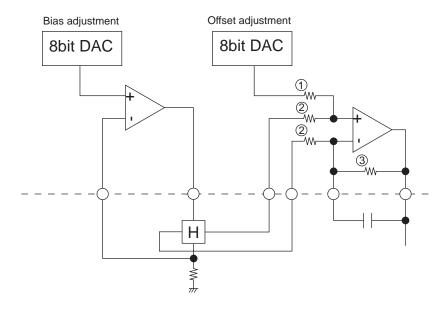

Note: An initial value of A0 to A3 = 1111 is a static test mode. Use it specifying data D0 for one.

TEST mode setting

| as a mode setting | | | | | | | |
|-------------------|----|----|----|----|--------------------|--------------|--|
| Input | | | | | Catting made | Contont | Domonto |
| A0 | A1 | A2 | A3 | D0 | Setting mode | Content | Remarks |
| 1 | 1 | 1 | 1 | 0 | NC pin _ TEST mode | External CLK | It uses it by the shipment inspection. |
| | | | | 1 | | Internal CLK | Internal CLK operation |

Note: External CLK mode is for the shipment inspection. Use it with internal CLK. Use it after it internal CLK switches because default is external CLK mode.

Hall bias, Offset adjustment circuit configuration

Hall amplifier, Hall bias equivalent circuit

About the gain adjustment

The resistance ratio of "2" and "3" is adjusted in figure and the gain is set. Refer to the setting to the cereal map. The magnification can be set from ten by 200.

About the Offset adjustment

The resistance ratio of "1" and "2" is adjusted in figure and the Offset is set. Refer to the setting to the cereal map. The magnification can be set from ten by 200.

Note in design

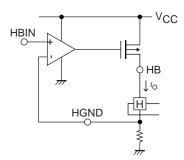

• Stand-by function

IC becomes a stand-by state at ST = L, and IC enters the state of operation at ST = H. Moreover, the register in IC is reset as for ST = L at times.

• Hall bias

The constant current output is built into for the hall element drive. The constant current value is set from detection resistance (RHG) connected from the HBIN pin impression voltage and the HGND pin between GND.

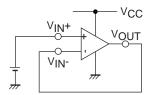

Constant current value (I_O) = HBIN voltage \div Detection resistance

Constant current value (I_O) becomes about 1mA when assuming HBIN pin impressed voltage =1.0V and detection resistance = 1 k Ω from the above-mentioned calculation type. Moreover, the HGND pin must connect with the HB pin, and connect the detection resistance of a large value as much as possible when you do not use the hall bias circuit.

• Operation amplifier

Impress the bias to the V_{IN} + pin, and compose the buffer by the connection to the VOUT pin in the V_{IN}- pin in the operational amplifier not used.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
