# Corporate Profile

Micrel Inc., is a leading global manufacturer of IC solutions for the worldwide Analog, Ethernet and High Bandwidth markets. The Company's products include advanced mixed-signal, analog and power semiconductors; high performance communication, clock management, Ethernet switch and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe and Asia. In addition, the Company maintains an extensive network of distributors and reps worldwide. Web: <http://www.micrel.com>.

Founded in 1978, Micrel maintains a portfolio of world class wafer fabrication processes that enable the Company to produce new products faster than the competition. The Company uses, singularly or in combination, CMOS, Bipolar and DMOS technologies in its analog products. With the acquisition of Synergy Semiconductor in 1998, Micrel has high-speed bipolar capability in the form of ASSET™ (All Spacer Separated Element Transistor) process. This proprietary, patented bipolar technology employs a narrow deep-trench isolation technique allowing for electrical isolation between adjacent circuit elements. This means the Company can place multiple analog and digital functions on the same IC without the various functions causing interference typically found when alternate techniques are utilized.

## Ethernet ICs

Micrel is an established leader in wired Ethernet networking with more than 300 million ports shipped. The Company's Ethernet products are widely used in Digital Home devices (IP-STB, IP-TV, etc.), routers, access points, VoIP, Automotive, Industrial and Power over Ethernet (PoE) applications, to name a few. There are a wide range of field-proven, multi-port products in a variety of packages, including Physical Layer Transceivers (PHYs), Embedded Controllers, Unmanaged and Managed Switches and System-on-Chip (SoC) ICs with an integrated processor. Micrel's comprehensive portfolio of Ethernet products operate over commercial, industrial and extended temperature ranges, and are available in a variety of environmentally friendly, lead-free packaging options.

## High-BandWidth and Communication Solutions

Micrel's High-BandWidth and Communication products include PMD (Physical Media Device) ICs such as multi-rate (up to 4.25Gbps) Laser drivers, post amplifiers and optical module management controllers for all types of fiber optical module applications. It also includes physical layer ICs such as 155Mbps and multi-rate (up to 2.7Gbps) CDRs (Clock and Data Recovery), and MUX/DeMUX ICs for Access and Telecommunications applications. This growing family of devices leads the industry in design innovation and flexibility. The ICs often exceed stringent industry requirements.

## Precision Edge® Products

Micrel's Precision Edge® product family includes precision frequency synthesizers, clock distribution and translation, multiplexers, crosspoint switches, and high-speed gates — all aimed at meeting the most rigorous, timing-critical applications. All Precision Edge® products are designed to provide the lowest skew and jitter IC solutions available.

## Low-Dropout Voltage Regulators

Micrel has gained a reputation as a leading supplier of LDO regulators and is a major global supplier to the mobile phone and computing industries. The Company maintains a very broad portfolio of LDO regulators ranging from 10mA devices in Teeny™ SC-70-5 packages to 7.5A power devices and LDO controllers for even higher current applications. Input voltages up to 120V are supported.

## Radio Frequency Products

Micrel's RF offering consists of two product groups: QwikRadio® receivers and transmitters for actuation devices such as remote controls and remote keyless entry; and RadioWire® transceivers for connectivity applications such as wire replacement in industrial control and security systems.

## Universal Serial Bus and PCMCIA

As a recognized leader of USB and PC Card power distribution solutions, Micrel's extensive selection of ICs are consistently used by many of the leading PC and peripheral OEMs.

## Hot Swap Controllers

Micrel's hot swap power controllers support the industry requirement for high availability (24/7/365) operation in servers, telecom and datacom equipment, and enterprise storage networks. These products allow customers to upgrade or replace system boards without having to power down the entire system. Offering products for primary- and secondary-side applications, Micrel's family of hot swap power controllers offers customers a wide range of product choices uniquely suited to these applications. This product portfolio includes the award-winning MIC2590B, the industry's most integrated dual-slot hot swap power controller for PCI and CompactPCI® applications. Leveraging Micrel's expertise in power control and distribution, the MIC2590B was designed to support Intel's Itanium® 64-bit server platforms. To address the next generation, more dual-slot power controllers are in development. For primary-side applications, the Company continues to add innovative products to the high-voltage

hot swap product portfolio, addressing power control applications for the telecommunications, data communications, and data storage equipment markets.

## MOSFET Drivers

Micrel offers a broad range of MOSFET drivers, ranging from IttyBitty® devices in SOT-23 packaging to 12A high-power devices. "New" device families offer thermally enhanced exposed pad SOIC, MSOP and space saving efficient MLF® 2x2mm, 3x3mm and 4x4mm package options.

## Switch-Mode Power Supply Products

Micrel has a rapidly expanding portfolio of switching regulator products serving the mobile device, portable computer, telecommunications and industrial markets. All products combine Micrel's advanced processes with the Company's strong design expertise to produce best-in-class products. These products address step-up, step-down and multi-output systems (PMICs), all offering designers speed and efficiency advantages. Micrel also offers an expanding line of DC/DC Regulators with internal MOSFETs and Inductors.

## System/Thermal Management Products

Thermal management is an increasingly critical function in today's portable and high performance systems. Micrel's proprietary technology enables more functionality in smaller packages and superior, real-world accuracy in temperature measurement via embedded thermal diodes. Thermal diodes are increasingly used to monitor the die temperature of high-performance integrated circuits such as Intel® and AMD® microprocessors, Xilinx Virtex®, FPGAs, and ASICs. Micrel's family of products include the world's first and only IttyBitty® SOT-23 thermal diode supervisor IC and the smallest three-zone thermal supervisor. All together, Micrel offers a complete family of one, two, and three-zone thermal supervisor ICs as well as both analog and digital fan controllers.

## Operational Amplifiers and Comparators

The Company has a broad range of high and low voltage op amps and comparators. These ICs range from general purpose to high speed devices. Of particular note is the MIC86x family of ICs which are, by far, the lowest power consumption op amps of their type on the market. The advanced features of these products make them ideally suited for all forms of battery-powered equipment.

## Other Product Lines

- Voltage references
- Voltage supervisors
- Miniature MOSFETs
- Serial and parallel-input latched drivers
- Display drivers
- Latched drivers
- Custom and semi-custom products

## Big Technology, Small Package Innovation

In response to increasing demands for smaller and smaller footprint solutions, Micrel leads the industry in packaging innovation with IC packaging options, including MLF® technology, down to .85mm x .85mm and smaller CSP packages.

## Quality Assurance

Micrel first achieved ISO 9001 registration on March 31, 1997 and on December of 2004, the Company's wafer fabrication facility was certified to ISO14001:1996, the International Environmental Management System Standard. The goal of the environmental management system is to ensure regulatory compliance and to reduce environmental impact through waste reduction and recycling. Micrel is committed to delivering products and services that meet or exceed our customers' expectations — error free, on-schedule, and at a competitive price. Micrel maintains a culture of continuous improvement that runs through all disciplines in the company and includes the activities of its suppliers.

## Commitment to Customer Satisfaction

Micrel remains committed to contributing to its customers' success. Internal processes have been developed with flexibility in mind, so the Company can quickly react to changing requirements. Micrel's outstanding sales, customer service and technical support organizations are set up to address customer needs and requirements.

# Analog Product Highlights

## MIC26601/901/1201 - SuperSwitcher II™ Buck Regulators

## MIC26603/903/1203 - SuperSwitcher IIG™ Buck Regulators

The Micrel SuperSwitcher II™ and SuperSwitcher IIG™ families comprise synchronous buck regulators featuring a unique adaptive on-time control architecture. These devices operate over an input supply range of 4.5V to 28V and provide up to 12A of output current. The output voltage is adjustable down to 0.8V with a guaranteed accuracy of  $\pm 1\%$ .

Micrel's Hyper Speed Control™ architecture allows for ultra-fast transient response while reducing the output capacitance and also makes (High  $V_{IN}$ )/(Low  $V_{OUT}$ ) operation possible. This adaptive  $t_{ON}$  ripple control architecture combines the advantages of fixed-frequency operation and fast transient response.

Micrel's HyperLight Load® architecture provides the same high-efficiency and ultra-fast transient response as the Hyper Speed Control™ architecture under medium to heavy loads, but also maintains high efficiency under light load conditions by transitioning to variable-frequency, discontinuous-mode operation.

The family offers a full suite of protection features to ensure protection of the IC during fault conditions. These include undervoltage lockout to ensure proper operation under power-sag conditions, internal soft-start to reduce inrush current, foldback current limit, "hiccup" mode short-circuit protection and thermal shutdown.

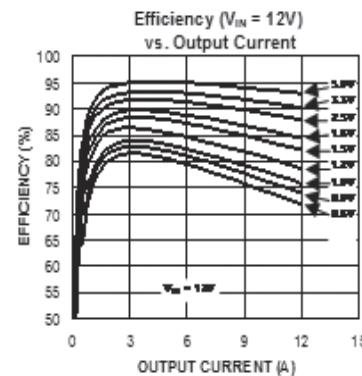

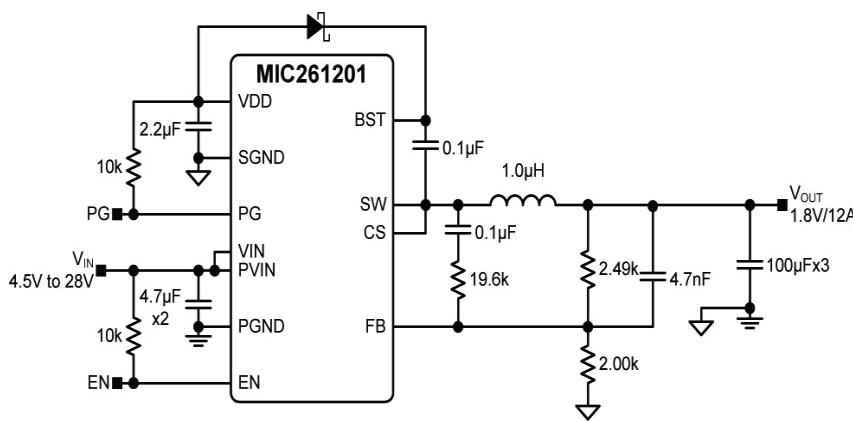

P/N	Hyper Speed Control™	HyperLight Load®	Max Input Voltage	Max Output Current
MIC26601	X		28V	6A
MIC26901	X		28V	9A
MIC261201	X		28V	12A
MIC26603	X	X	28V	6A
MIC26903	X	X	28V	9A
MIC261203	X	X	28V	12A

## Features

- Hyper Speed Control™ architecture (MIC26x01) enables:
  - High Delta V operation ( $V_{IN} = 28V$  and  $V_{OUT} = 0.8V$ )
  - Small output capacitance
  - Excellent transient response
- HyperLight Load® (MIC26x03) maximizes light load efficiency:
  - Up to 80% at 10mA
- Input voltage range: 4.5V to 28V
- 6A-12A output current capability
- High full-load efficiency: up to 95%
- Adjustable output voltage from 0.8V to 5.5V
- $\pm 1\%$  FB accuracy
- Any Capacitor™ stable - zero-to-high ESR
  - Zero-ESR to high-ESR output capacitors
- Power Good (PG) output
- Foldback current-limit and "hiccup" mode short-circuit protection
- Safe start-up into pre-biased loads
- Available in: 28-pin (5mm x 6mm) MLF® package

## Applications

- Distributed power systems
- Communications/networking infrastructure
- Set-top box, gateways and routers
- Printers, scanners, graphics and video cards

# Ethernet Product Highlight

## IEEE 1588v2 EtherSynch™ Switch for Industrial Ethernet Networks

Micrel's KSZ84XX family provides efficient end-device connectivity for Industrial Ethernet networks, minimizing per-device attachment costs.

The KSZ84XX family features EtherSynch™ technology, blending IEEE 1588v2 time stamping, precision local clock, synchronized I/O, and wire-speed Ethernet switching in a compact package. The device supports leading Industrial Ethernet standards including Ethernet/IP™, Profinet™, PowerLink™, among others.

Precision GPIO extends synchronization to local devices and allows multiple end devices to share the Industrial Ethernet attachment. The 12 Precision GPIO are capable of creating complex waveforms, with multiple GPIO events supported per pin.

Micrel pre-qualified and optimized the KSZ84XX family to operate with an optimized Precision Timing Protocol (PTPv2) protocol stack to get up and running quickly.

The hardware-oriented chip architecture reduces synchronization and communications processing demands, streamlining the Host CPU.

Micrel features the industry's most robust, and low-power Industrial Ethernet switches, complemented by advanced physical layer technology, and power management.

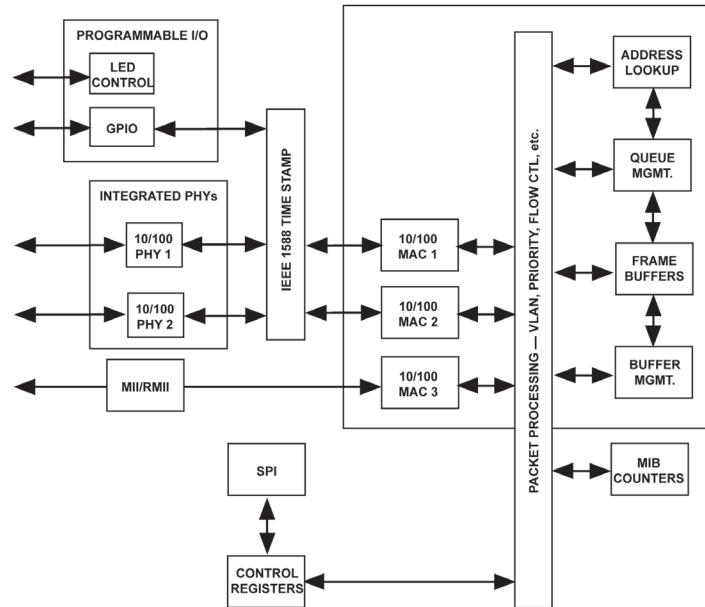

### Applications

- Industrial Ethernet end-device attachments for both distributed and centralized topologies
- Daisy Chained 1588 networks

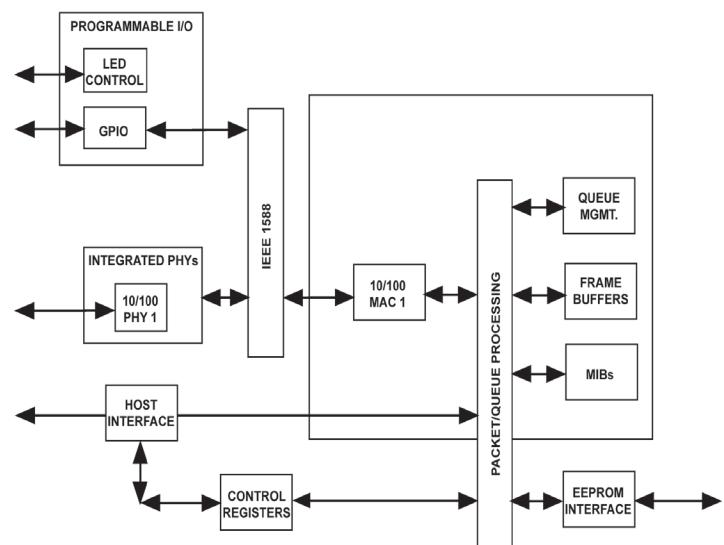

### Ordering Information

P/N	Ports	Interface
KSZ8463MLI	3	MII
KSZ9463RLI	3	RMII
KSZ8442HLI	3	8/16-Bit
KSZ8441HLI	1	8/16-Bit

- Package: ROHS 64-pin LQFP (10mm x 10mm)
- Power: single 3.3V supply, @ < 500mW
- Industrial temperature range: -40°C to +85°C

KSZ8463MLI / RLI

# High Bandwidth Product Highlights — ClockWorks™ Family

## The Next Generation of Ultra-Low Jitter Clock Synthesizers

Micrel's new ClockWorks™ Flex products are comprised of the SM802xxx series, which feature breakthrough technology advancements.

The SM802xxx series is the first offering within the new ClockWorks Flex family, the next generation of high-performance programmable clock synthesizers. These One Time Programming (OTP) devices eliminate the need for lengthy mask spin cycles, and allow prototypes to be supplied typically within a few days, allowing for fast and optimized clock tree solutions.

Common applications include SONET, Gigabit Ethernet, 10 Gigabit Ethernet, and similar networking standards. The device synthesizes different low-noise LVPECL output frequencies such as 125MHz, 156.25MHz, 312.5MHz, and 625MHz for Ethernet applications, and 77.76MHz, 155.52MHz, 311.04MHz, and 622.08MHz for SONET applications. Additional frequencies include 106.25MHz, 212.5MHz for Fibre Channel applications, and 100MHz and 200MHz for PCIe applications.

## ClockWorks™ Family

Part Number	Output Type / No.	Application	Package
SM802101UMG	HCSL (8)	PCI-e	44-QFN
SM802104UMG	LVPECL (2)	Fiber Channel	24-QFN
SM802105UMG	LVPECL (2)	10GbE/XAUI	24-QFN
SM802108UMG	LVPECL (2)	GbE/10GbE	24-QFN
SM802109UMG	HCSL (4)	PCI-e	24-QFN
SM802110UMG	LVPECL (1)	CPRI	24-QFN
SM802111UMG	LVPECL (2)	GbE	24-QFN
SM802116UMG	LVDS (2)	Fiber Channel	24-QFN

## Features

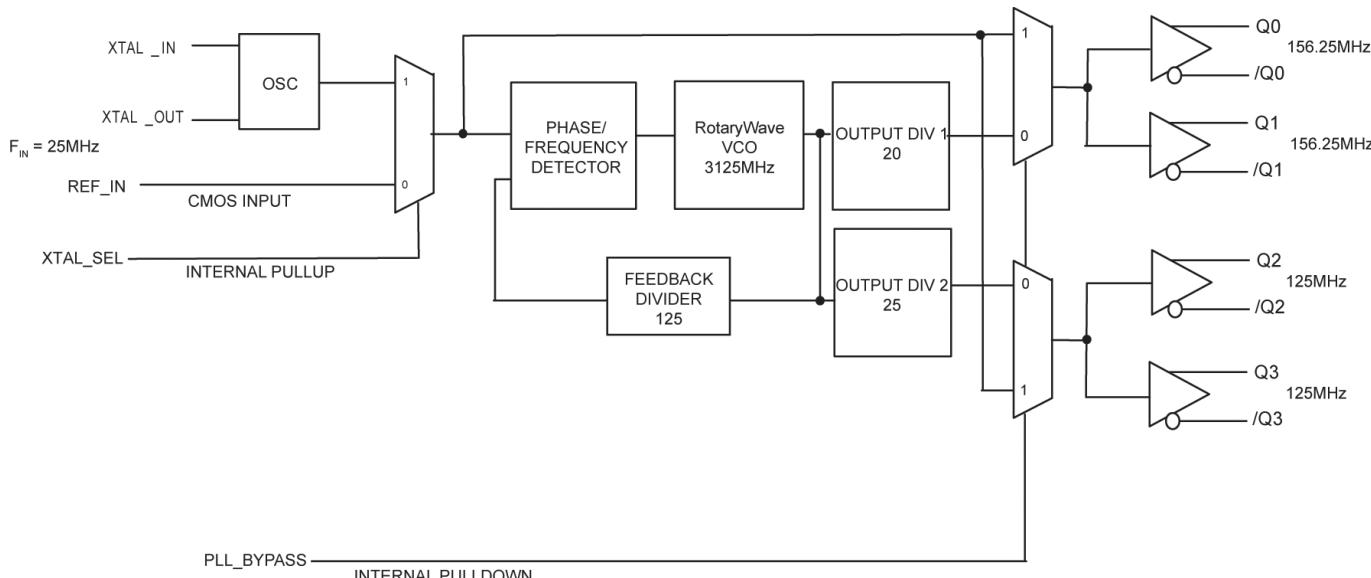

- Typical phase jitter
  - 110fs (1.875MHz – 20MHz)
  - 250fs (12kHz – 20MHz)
- High PSRR
- LVCOMOS, LCPECL, LVDS, and HCSL output logic
- 2.5V/3.3V supply voltage
- 75MHz to 625MHz
- Up to 8 differential or 16 single-ended outputs

## Applications

- 10Gigabit Ethernet
- Gigabit Ethernet

## Markets

- Switches/routers
- Networking
- Storage servers
- Data centers
- FTTH PON
- Cellular base stations

**Bold = New**

P/N	Input	Output	Voltage	Package	Description
SY10/100S891	ECL	ECL	5	PLCC-28	5-Bit Registered Transceiver.
SY100S301	ECL	ECL	5	PLCC-28	Triple 5-Input OR/NOR.
SY100S302	ECL	ECL	5	PLCC-28	Quint 2-Input OR/NOR.
SY100S304	ECL	ECL	5	PLCC-28	Quint AND/NAND.
SY100S307	ECL	ECL	5	PLCC-28	Quint XOR/XNOR.
SY100S313	ECL	ECL	5	PLCC-28	Quad Driver.
SY100S314	ECL	ECL	5	PLCC-28	Quint Differential Line Receiver.
SY100S317	ECL	ECL	5	PLCC-28	Triple 2-Wide OA/OAI.
SY100S318	ECL	ECL	5	PLCC-28	5-Wide 5,4,4,4,2 OA/OAI.
SY100S321	ECL	ECL	5	PLCC-28	Low-Power 9-Bit Inverter.
SY100S322	ECL	ECL	5	PLCC-28	9 Bit Buffer.
SY100S324	TTL	ECL	5	PLCC-28	Low Power Hex TTL to ECL Translator.
SY100S325	ECL	TTL	5	PLCC-28	Low Power Hex ECL to TTL Translator.
SY100S331	ECL	ECL	5	PLCC-28	Triple D Flip Flop.
SY100S341	ECL	ECL	5	PLCC-28	8-Bit Shift Register.
SY100S350	ECL	ECL	5	PLCC-28	Hex D Latch.
SY100S351	ECL	ECL	5	PLCC-28	Hex D Flip Flop.
SY100S355	ECL	ECL	5	PLCC-28	Quad Multiplexer/Latch.
SY100S360	ECL	ECL	5	PLCC-28	Dual Parity Checker/Generator.
SY100S363	ECL	ECL	5	PLCC-28	Dual 8-Input Multiplexer.
SY100S364	ECL	ECL	5	PLCC-28	16-Input Multiplexer.
SY100S366	ECL	ECL	5	PLCC-28	9-Bit Comparator.
SY100S370	ECL	ECL	5	PLCC-28	Universal Demux/Decoder.
SY100S371	ECL	ECL	5	PLCC-28	Triple 4-Input Multiplexer w/ Enable.
SY100S391	TTL	ECL	5	PLCC-28	Low Power Hex TTL to PECL Translator.
SY100S811	PECL/TTL	PECL	5	PLCC-28	1:9 PECL/TTL-to-PECL Fanout Buffer.
SY100S815	PECL/TTL	PECL	5	SOIC-16	Quad PECL/TTL-to-PECL Fanout Buffer.
SY100S834/L	LVPECL/PECL	LVPECL/PECL	3.3/5	SOIC-16	(÷1, ÷2, ÷4) or (÷2, ÷4, ÷8) Clock Generator.
SY100S838/L	LVPECL/PECL	LVPECL/PECL	3.3/5	SOIC-20	(÷1, ÷2/3) or (÷2, ÷4/6) Clock Generator.
SY100S863	ECL	ECL	5	PLCC-28	8-Input PECL Differential Multiplexer.

# Communications Product Highlights — Lowest Power SFP

The **MIC3003GFL** is a fiber optic module controller which enables the implementation of sophisticated, hot-pluggable fiber optic transceivers with intelligent laser control and an internally calibrated Digital Diagnostic Monitoring Interface per SFF-8472. It essentially integrates all non-data path functions of an SFP/SFP+ transceiver into a tiny (3mm x 3mm) QFN package. It also works well as a microcontroller peripheral in transponders or 10Gbps transceivers. The MIC3003GFL uses the same die as the MIC3003 with all its functions, but in a smaller package and different pin out.

Communication with the MIC3003 is via an industry standard 2-wire SMBus serial interface. Nonvolatile memory is provided for serial ID, configuration, and separate OEM and user scratchpad spaces.

The **SY84782U** is a single 2.5V supply, ultra-low power, small form factor laser diode driver for telecom/datacom applications. Intended to drive FP/DFB lasers at data rates up to 1.25Gbps, it is especially useful for Compact SFP, SFP and SFF modules where power requirements are quite stringent. The driver can deliver modulation current up to 90mA and offers a high compliance voltage, all of which make the SY84782U suitable for high current operations in both AC- and DC-coupled applications.

The SY84782U is intended to be used with Micrel's MIC3003 Optical Transceiver Management IC, which allows for both modulation and bias current control and monitoring. Furthermore, the MIC3003 offers power control and temperature compensation.

The **SY84113BU** low power limiting post amplifier is designed for use in fiber-optic optical modules for multirate applications up to 1.25Gbps. The device connects to a typical transimpedance amplifier (TIA) and can produce output signals to CML-level waveforms. Intended for use in GbE and Fibre Channel applications, the SY84113BU offers a wide LOS range. It is able to detect input signals for as low as 5mV<sub>PP</sub> and as high as 100mV<sub>PP</sub>. The SY84113BU is intended to be used in AC-coupled input applications.

The SY84113BU generates a Loss-of-Signal (LOS) open-collector TTL output. A programmable Loss-of-Signal level set pin (LOSLVL) sets the sensitivity of the input amplitude detection. LOS asserts high if the input amplitude falls below the threshold set by LOSLVL and de-asserts low otherwise. The enable input (/EN) de-asserts the true output signal without removing the input signal. The LOS output can be fed back to the /EN input to implement the squelch function that maintains output stability under a loss-of-signal condition.

SY87700L	AnyRate® Clock and Data Recovery	CDR	32-175	PECL	3.3V	EPAD-TQFP-32, SOIC-28 <sup>(2)</sup>	Yes
SY87701V	AnyRate® Clock and Data Recovery	CDR	32-1250	PECL	3.3/5V	EPAD-TQFP-32, SOIC-28 <sup>(2)</sup>	Yes
SY87701L	AnyRate® Clock and Data Recovery	CDR	32-1250	PECL	3.3V	EPAD-TQFP-32, SOIC-28 <sup>(2)</sup>	Yes
SY87721L	AnyRate® Clock and Data Recovery	CDR	28-2700	CML/PECL	3.3V	EPAD-TQFP-64	Yes
SY69753L	Clock and Data Recovery	CDR	125-155	PECL	3.3V	EPAD-TQFP-64	Yes
SY69952	Clock Recovering Transceiver	Transceiver	51.84-155	PECL	5V	SOIC-28 <sup>(2)</sup>	n/a

(1) Run on 30% less ICC than the SY69753L, SY87700V/L or SY87701V/L and are recommended for new designs.

(2) 28-Pin SOIC is available, but not recommended for new designs.

## Multiplexer/Demultiplexer

<b>P/N</b>	<b>Function</b>	<b>Data Rate (Gbps)</b>	<b>Data Output Type</b>	<b>VCC</b>	<b>Temperature</b>	<b>Conversion</b>	<b>Package</b>
SY87724L	MUX and DeMUX	2.7Gbps	PECL	3.3V	Industrial	1:, 1:5, 1:8, 1:10, 4:1, 5:1, 8:1, 10:1	TQFP-80
SY87725L	SERDES	2.5Gbps	CML	3.3V	Industrial	1:4, 4:1	EPAD-TQFP-64
SY10/100E445	DeMUX	2.5Gbps	PECL	5V	Commercial	1:04	LPCC-28
SY10/100E446	MUX	1.6Gbps	PECL	5V	Commercial	4:01	LPCC-28

# Communications and Fiber Optic ICs Selection Guide

## Optical Module Controllers

P/N	VIN (V)	Description	Package
MIC3001BML	3.3	SFP Management IC with Internal Calibration, SFP MSA and SFF-8472 compliant	24-pin 4x4 QFN
<b>MIC3003GFL</b>	3.0-3.6	FOM Management IC with Internal Calibration, SFP MSA and SFF-8472 compliant	24-pin 3x3 QFN
<b>MIC3003GML</b>	3.0-3.6	FOM Management IC with Internal Calibration, SFP MSA and SFF-8472 compliant	24-pin 4x4 QFN

## Fiber Optic Single-Chip Transceivers

P/N	Description	Features	VCC	Package	Eval. Board
SY88236L/AL <sup>(1)</sup>	GEPON and GPON ONU/ONT Module Transceiver	<ul style="list-style-type: none"> <li>• 2.5ns Tx Enable/Disable Time</li> <li>• Bias and Mod monitoring, RSSI</li> <li>• 70mA IBIAS/85mA IMOD</li> </ul>	3.3V	QFN-32 (5x5mm)	Yes
SY88232L/AL	SONET/GbE SFF/SFP Module Transceiver	<ul style="list-style-type: none"> <li>• Bias and Mod monitoring, RSSI</li> <li>• 70mA IBIAS/85mA IMOD</li> </ul>	3.3V	QFN-32 (5x5mm)	

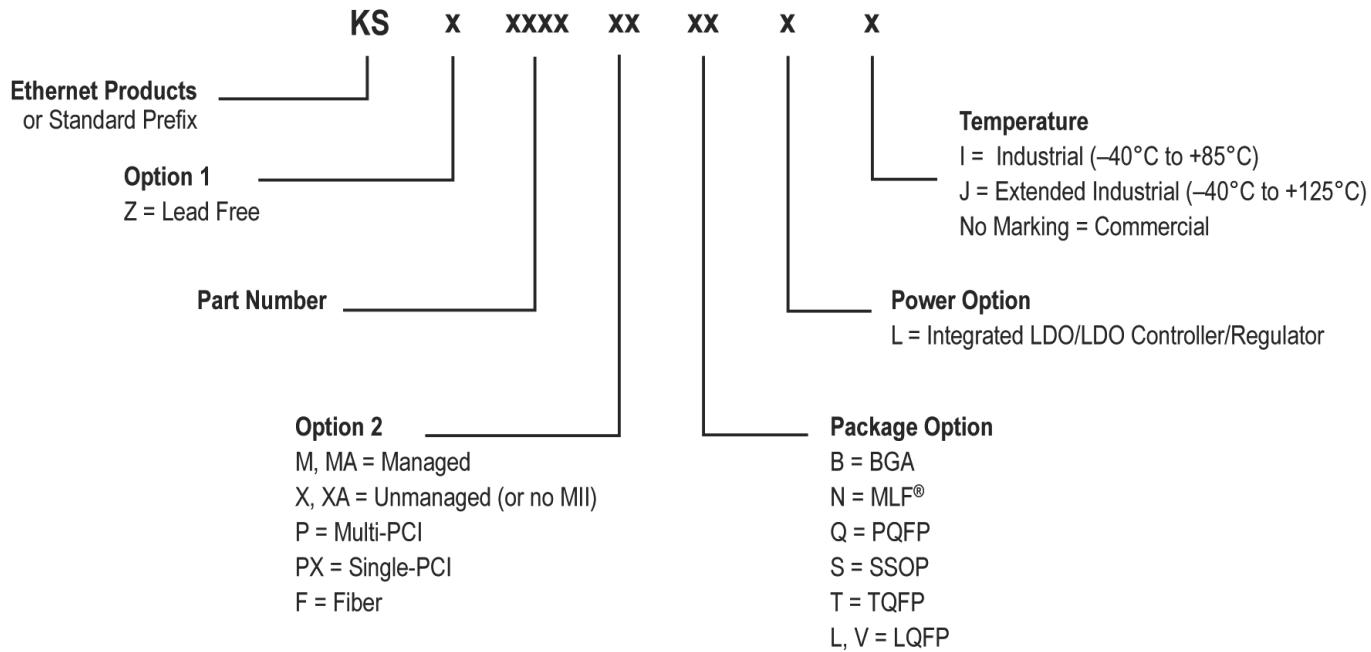

(1) The L version has internal input termination while the AL version does not.

## Fiber Optic Laser Diode Drivers

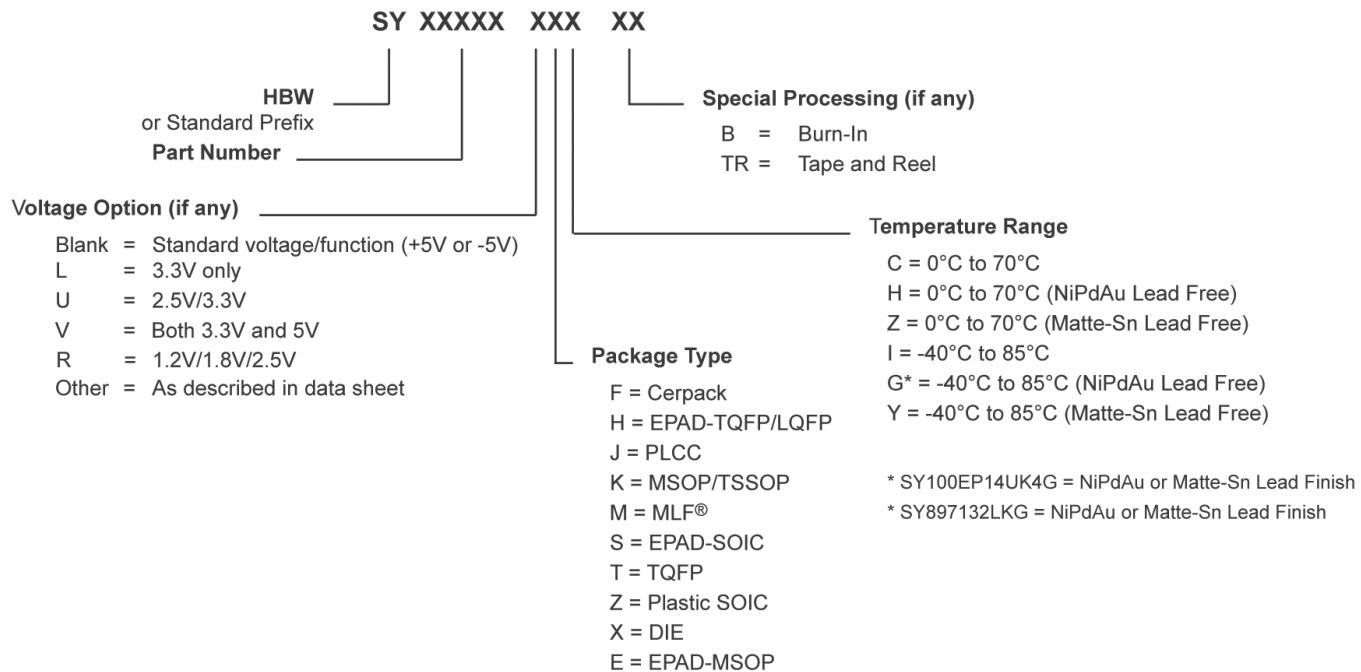

P/N	Description	Data Rate (Gbps)	Drive Current (mA)	VCC	Package	Eval. Board
SY84402L	Tiny VCSEL Laser Diode Driver	4.25	25	3.3V	QFN-10 (2x2mm)	Yes
<b>SY84782L</b>	Ultra Low Power 1.25Gbps Laser Diode Driver	1.25	90	2.5V	QFN-16 (3x3mm)	Yes
SY88022L	11.3Gbps FP/DFB Laser Diode Driver with Integrated Bias	11.3	60	3.3V	QFN-16 (3x3mm)	Yes
SY88024L	11.3Gbps VCSEL Laser Diode Driver with Integrated Bias	11.3	20	3.3V	QFN-16 (3x3mm)	Yes
SY88212L	Laser Driver with APC and Power Monitoring	2.5	85	3.3V	QFN-24 (4x4mm)	Yes
SY88216L	Burst Mode Laser Driver with APC and Power Monitoring	2.5	85	3.3V	QFN-24 (4x4mm)	Yes
SY88422L	Laser Driver with Integrated Bias	4.25	90	3.3V	QFN-16 (3x3mm)	Yes
SY88722V	Laser Driver with Output Enable	0.622	30	3.3/5V	MSOP-10	Yes
SY88782L	High-Current, Low Power FP/DFB Laser Driver	1.25	90	3.3V	QFN-16 (3x3mm)	n/a
SY88822V	Laser Driver with Output Enable	0.155	25	3.3/5V	MSOP-10	Yes
SY88902V	VCSEL Laser Driver with Output Enable	1.25	25	5V	MSOP-10	n/a
SY88912L	SONET/SDH Laser Driver	3.2	60	3.3V	QFN-16 (3x3mm)	n/a
SY88922	SONET/SDH VCSEL Laser Driver	2.5	25	5V	MSOP-10 (3x3mm)	n/a
SY88922V	SONET/SDH VCSEL Laser Driver	2.5	25	3.3/5V	MSOP-10 (3x3mm)	n/a
SY88932L	VCSEL/FP/DFB Laser Driver with Output Enable	4.25	60	3.3V	QFN-16 (3x3mm)	Yes
SY88982L	High-Current, Low Power FP/DFB Laser Driver	2.7	90	3.3V	QFN-16 (3x3mm)	Yes
SY88992L	VCSEL Driver with PE and Output Enable	4.25	25	3.3	QFN-16 (3x3mm)	Yes
SY89307V	Output Swing Differential Receiver—VCSEL Driver	2.125	25	3.3V/5V	QFN-8 (2x2mm)	Yes
SY100EL1003	Laser Driver with Output Enable	1.25	75	5V	SOIC-16	n/a
SY100EL16VS	Variable Output Swing Differential Receiver	1.25	25	3.3V/5V	MSOP-8 (3x3mm), SOIC-8	n/a
SY100EP16VS	Variable Output Swing Differential Receiver	2.5	25	3.3V/5V	MSOP-8 (3x3mm), SOIC-8	n/a

## Micrel Analog Standard

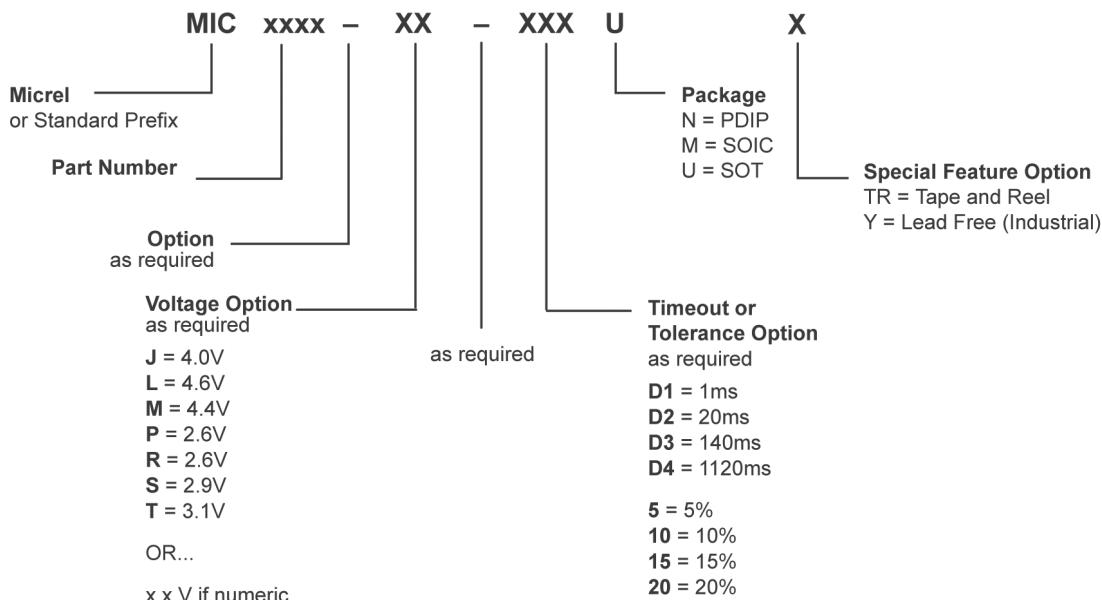

### Notes:

1. Typically, industrial grade power products rate the junction temperature up to +125°C.  
Varies from device-to-device. Refer to the datasheet.
2. Applicable to TO-220, TO-247, TO-263, SOT-223, SPAK packages using 85% lead plus lead alloy die attach material.  
Refer to the datasheet.

<b>C3</b> = SC70-3	<b>JL</b> = MLF®	<b>M5</b> = SOT-23-5	<b>TS</b> = TSSOP
