

## 4 Channel Low Capacitance ESD Protection Diode Array

HYESD0514P is a 4-channel ultra low capacitance ESD protection diode array which includes surge rated to protect high speed data lines. Each channel consists of a pair of ESD diodes that steer positive or negative ESD current to either the positive or negative rail. Typical application, the negative rail pin (Assigned as GND) is connected with system ground. The Positive ESD current is steered to the ground through an ESD diode and Zener diode and the positive ESD voltage is clamped to the zener voltage.
