

ADJUSTABLE VOLTAGE REGULATOR (POSITIVE)

LM317L

3-TERMINAL 100mA POSITIVE ADJUSTABLE REGULATOR

FEATURES

- Output current in Excess of 100mA
- Output Adjustable Between 1.2V and 37V
- Internal Thermal-Overload Protection
- Internal Short-Circuit Current-Limiting
- Output Transistor Safe-Area Compensation
- Floating operation for high voltage applications
- Moisture Sensitivity Level 3

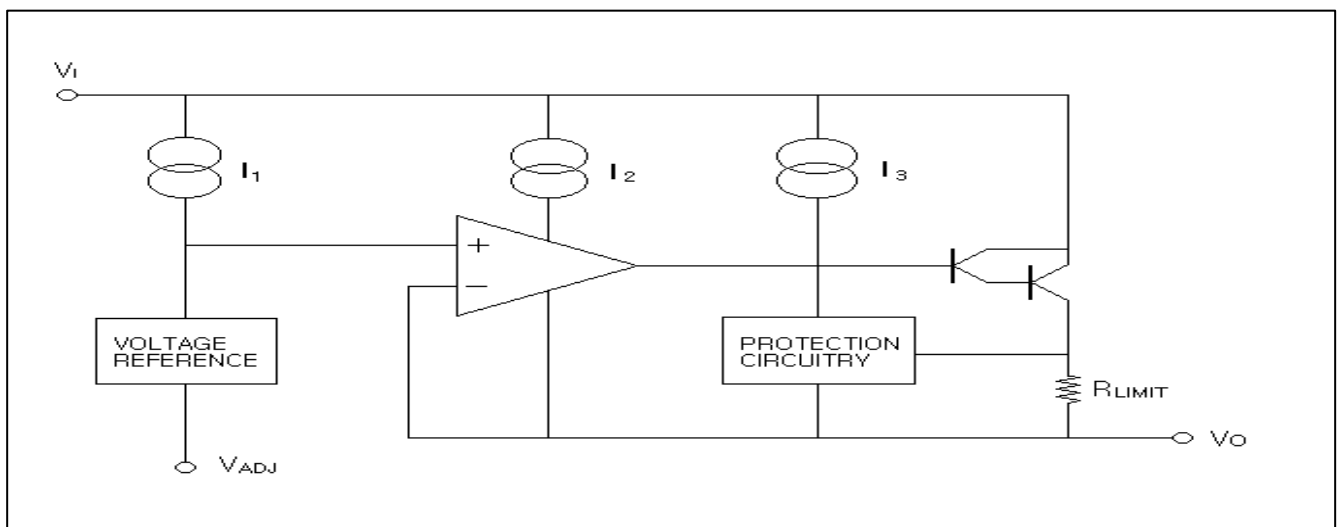

DISCRIPTION

This monolithic integrated circuit is an adjustable 3-terminal positive voltage regulator designed to supply more than 100mA of load current with an output voltage adjustable over a 1.2 to 37V. It employs internal current limiting, thermal shut-down and safe area compensation.

TYPICAL APPLICATIONS

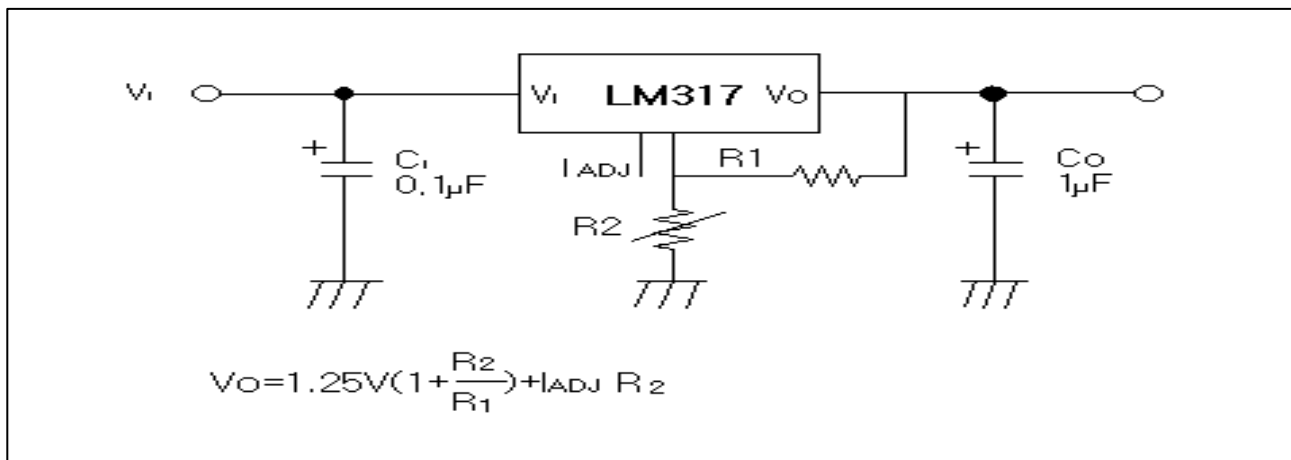

Fig.5 Programmable Regulator

C_i is required when regulator is located in appreciable distance from power supply filter. C_o is not needed for stability, however, it does improve transient response. Since I_{ADJ} is controlled to less than $100\mu A$, the error associated with this term is negligible in most applications.
